

2018 Special Presentation for FOD Kids age grade 2-5/6

Max # 20

This year in the Children's Room we are excited to offer an educational adventure seminar for 2nd-5/6 graders who are affected by FODs and/or their siblings! The seminars build upon each other. On the first day, children will read/receive a Magic School Bus book about the body, learn how the body works, work together to create their own 2-D body, and build 3-D molecules of carbohydrates, proteins and fats. The first day's session will go from 8:15am – 12pm. There will be non-fat snacks provided at 9:45 am.

On the second day a 90-minute seminar will be provided, where the children will learn and ask questions more specific to their metabolic condition. (Again age appropriate siblings welcome!) We will use our modules from the previous day to discuss how their body uses fat, importance of learning how to ask doctors questions and, discuss/perform an experiment around the question: "What is rhabdomyolysis?"

The purpose of these seminars is to teach the children more about their body and create a safe place where they can share, and ask each other questions about their condition. The activities will be hands on and fun! If your child would like to attend please contact Stephanie Harry at srharry374@hotmail.com by May 30, 2018 so she can have enough supplies! You will still need to REGISTER for the conference (refer to the www.fodsupport.org homepage! If you have any questions about the material to be presented, do not hesitate to contact me!
